JOURNAL OF CRYSTAL GROWTH

Subject index

Apparatus
– for agglomeration
– – of gibbsite 124
– for beryllium growth
– – by mirror furnace 578
– for indium gallium arsenide growth
– – by double crucible 217
– for pure crystals
– – of potassium magnesium ferrite 89
– for vapor growth
– – of ice 795

Beryllium 575, 578

Computer simulation
– of conversion phenomenon 697
– of epitaxial growth 61
– of heat flow 269
– of moving boundaries 161
– of protein crystallization 361
– of stress field 102
– of YBCO 79
Crystal growth, special
– of nanostructures 13
Convection 110, 147, 582, 773

Dendritic growth
– theory of density change upon solidification 798
Device characterization
– electroluminescent 33
– electronic devices 201, 227, 637, 649
– heterojuntion 201, 227, 629
– induced conductivity 124
– lasers 293, 643
– quantum wells or dots 424, 629
– transistors 435, 637
Diamond 722
Diffusional control 380
– of faceting 607
– of protein crystal growth 361
– of solute redistribution 170
Doping of, in
– antimony in silicon 665
– germanium in silicon 598
– nitrogen in zinc selenide 243
– silver in YBCO 463
– tellurium in gallium antimonide 450
– zinc in copper germanate 469

Electronic devices, see Device characterization
Etching
– chemical 51, 409
Eutectic growth
– of urea–p. chloronitrobenzene 563

Gallium
– arsenide 1, 13

Heterojunction, see Device characterization
Hydrodynamics, see Convection

Kinetics
– of formation 83
– of growth 79, 279, 309, 347, 393, 429, 491, 496, 548, 570, 587, 607, 629, 697, 773
– of interface control 170, 201, 557, 629
– of nucleation 181, 331, 413
– of purification 339

Lasers, see Device characterization
Lysozyme 355, 752

Material analysis
– by atomic force microscopy
– – of potassium dihydrogen phosphate 548
– by optical absorption
– – of lithium niobate 98
– – of yttrium ortho-aluminate 98
– by X-ray
– – of silicon germanium 681
Melt growth technique
– by Bridgman–Stockbarger method
– – of lead–thallium 147
– – of potassium magnesium fluoride 89
– – of semitransparent fluorides 161
– – of sodium nitrate 368
– – theory of *g*-jitter 582
– by Czochralski method
– – of gallium arsenide 1
– – of indium phosphide 250

– – of lanthanum niobium gallate 503
– – of lead tungstate 304
– – of liquid crystals 136
– – of lithium niobate 409
– – of silicon 598
– – theory of melt/crystal interface 786
– by edge-defined film-fed growth
– – of sapphire 102
– by floating zone method
– – of copper germanate 469
– – of iron magnesium sulphate (olivine) 764
– – of iron sulphate 759
– – of lanthanum strontium cuprate 73
– – of silicon 269
– by travelling heater method
– – of cadmium telluride 704
– – theory of
– – – diffusional dominated process 380
– – – heat transport 704
– by zone melting
– – of indium bismuth 110
– – of indium gallium arsenide 217
– – of mercury 129
Microgravity, growth under
– of indium bismuth 110
– of iron magnesium sulphate (olivine) 764
– theory of fluctuation of *g*-jitter 582
Morphological stability
– of potassium dihydrogen phosphate 741

Nucleation
– of binary vapor 413
– of calcium carbonate 331
– of dislocations 209
Numbers
– Rayleigh 147

Phase diagram
– of barium ferrite 509
– of calcium phosphate 557
– of hydroxy apatite 557
– of indium gallium arsenide 217
– of proteins 355
– of urea–p. chloronitrobenzene 563
Precursor
– for calcium carbonate 339
– for phosphides 625
Proteins 355

Quantum dots, see Device characterization
Quantum wells, see Device characterization

Silicon 61, 598, 665, 672
– carbide 485, 491
Solid growth technique
– by hydrolysis
– – of carbonated apatite 539
– by recrystallization
– – of carbonated apatite 539
Solution growth technique
– by electrochemical deposition
– – of copper indium diselenide 287
– by flux method
– – of barium borate 734
– – of barium ferrite 509
– – of beta-potassium gadolinium tungstate 600
– – of BSCCO 405
– – of gel acupuncture 361
– – of potassium magnesium niobate arsenate 604
– – of potassium titanyl phosphate 534
– – of potassium zinc niobate arsenate 604
– by gel method
– – of lead hydrogen phosphate 317
– by Holden technique
– – of potassium dihydrate 196
– by hydrothermal growth
– – of lithium triborate 519, 527
– by low temperature method
– – of ammonium dihydrogen phosphate 325
– – of cadmium zinc manganese telluride 747
– – of calcium sulphate hemihydrate 118
– – of hexahydrate nickel sulphate 193
– – of hexamethylbenzene 325
– – theory of step bouncing 773
– by microwave activation
– – of calcium carbonate 339
Statistical mechanics, molecular theory
– of ice 393, 587
– of YBCO 79
Stefan problem or moving boundary problem
– of fluorides 161
– of silicon 269
Superconductivity materials, high T_c
– bulk
– – of BSCCO 405
– – of YBCO 79
– film
– – of YBCO 463, 715
Superlattices, multilayers
– of platinum/cobalt 83
– of III–V compounds
Surface structure
– of ice–vapor interface 393
– of rutile 309
Synthesis
– of hydrated europium cuprate 190

Thin film growth, epitaxy
– by atomic layer epitaxy
– – of silicon 672
– – of titanium oxide 496
– by liquid phase epitaxy
– – of gallium arsenide 181
– – of indium gallium arsenide 613
– – of lithium niobate 94
– – of mercury cadmium telluride 480

– – of YBCO 715
– by molecular beam epitaxy
– – of aluminum gallium arsenide 637
– – of calcium chloride 40
– – of cerium 299
– – of gallium antimonide 450
– – of gallium arsenide 223, 607, 649
– – of indium aluminum arsenide 435
– – of indium gallium arsenide 209, 424, 435, 637, 649
– – of indium phosphide 435
– – of nickel aluminium 201
– – of silicon 665, 681
– – theory of
– – – lateral thickness 175
– – – silicon carbide growth 491
– by vapor phase epitaxy
– – through chemical vapor deposition
– – – of aluminum gallium antimonide 417
– – – of aluminum gallium arsenide 227
– – – of aluminum gallium arsenide antimonide 417
– – – of diamond 722
– – – of gallium antimonide 417
– – – of gallium arsenide 227, 429, 629
– – – of gallium nitride 185
– – – of in situ monitoring 443
– – – of indium gallium arsenide 429
– – – of indium phosphide 621, 625
– – – of magnesium oxide 474
– – – of magnesium zinc selenide sulphide 293
– – – of silicon 61
– – – of silicon germanium 261
– – – of zinc cadmium telluride 27
– – – of zinc sulphide 33
– – – of zirconium selenide 243
Transistors, see Device characterization

Vapor growth technique
– by aerosol formation and reaction
– – of gallium arsenide 13
– by chemical transport
– – of copper indium diselenide 287
– – of gallium nitride 689
– – of silicon 61
– – of silicon carbide 485
– by evaporation and condensation
– – of β-Ca_2SiO_4 376
– – of cadmium zinc telluride 20
– – of ice 795
– – of lithium fluoride 279
– – of silicon germanium 261
– – of zinc selenide 660
– theory of 393

Whisker growth
– of tungsten oxide 727
